

ABSTRACT OF THE DISCLOSURE

Methods, systems, and articles of manufacture consistent with the present invention provide processing of a document containing an embedded object having a first format corresponding to a first program that is unavailable on the data processing system. It is determined whether the first program is an unavailable program. When it is determined that the first program is unavailable, the embedded object is converted into a second format different from the first format that is suitable for use with a second program that is available on the data processing system.
